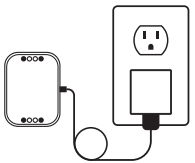
Cloud Based Emergency Response System

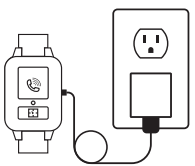
- Small lightweight wearable design.
- Water resistant.
- User friendly and easy to charge.
- Voice prompts for time and battery percentage.
- Multiple language support.
- Equipped with WI-FI and GPS for precise location tracking.
- User friendly and easy to charge.
- Powered by AT&T's 4G LTE network.

Installation of the myConnect Air is easy!

1. Plug the charging cradle into power. Make sure the outlet is NOT controlled by a light switch. Make sure the power cord does not cause any trip hazards.



2. Place the myConnect Air into the charging cradle. Once properly placed, you will hear the myConnect Air chime, followed by the announcement “Powering ON” and then “Charging”.



3. Perform a test into the monitoring center by pressing and holding the help button until you hear “Calling for Help”. After a short pause you will be able to talk to a monitoring center representative.

Status Light Chart		
Light	**Event**	**State**
Blue LED	Powered On (Flash 60 Seconds)	
	Powered Off	
	Call In Progress	
Red LED	Fully Charged	
	Charging In Progress (Flash 6 Seconds)	
	Low Power (Flash 10 Seconds)	

Tips and Reminders

1. The myConnect Air has a built in clock that will announce the time for you by simply pressing the clock button once. This clock will automatically obtain the correct time from a local cell tower. It is not necessary to set the time manually.
2. It is important to test your myConnect Air device monthly to ensure it is working.
3. Your myConnect Air is water resistant. However, it should never be fully submerged in water. Ensure your myConnect Air is dry prior to placing it in the charging cradle.
